

Not another app. A recruiting coworker.

Loved by recruiters. Approved by CIOs. Enterprise recruiting, without the IT fight.

› THREE WAYS, AT YOUR OWN PACE

We meet you where you are. And take you where you want to go.

1

RECRUITING TOOLS

A stronger pipeline,
faster.

Sourcing

Find people who never applied,
across 1B+ profiles and your ATS.

Applicant Evaluation

Your best applicants surface
first, with the reasoning shown.

AI Screening

A short, structured interview
before the first call.

Candidate Integrity

Integrity checks flag signs of
candidate fraud.

›

2

INSIDE YOUR AI

Faster to approve.
Easier to adopt.

Use SeekOut inside
Microsoft 365 Copilot, ChatGPT,
Claude, Gemini, and
Amazon Quick.

Ask in plain language for a
ranked shortlist with the
evidence, or outreach drafts.

**Connects through SeekOut
MCP. By default, nothing sends
without your OK.**

›

3

AI COWORKER

Your recruiters focus on
people, not prep.

It does the legwork around every
search, right inside your AI, so
your recruiters can start without
a long IT project.

It reads the req, your notes, and
the hiring manager's feedback,
tests the role against the
market, builds the sourcing plan,
and drafts outreach in your
voice.

YOU SET THE AUTONOMY

**Suggest › Act with approval ›
Run on a schedule**

Your recruiters set the bar and make the calls.

› TRUSTED BY 750+ ENTERPRISES

DELL Technologies

NETFLIX

Thomson Reuters

Uber

IBM

› Bring a role you're hiring for. See it worked live.

Judge AI like you'd judge a new hire.

AI tools need what new employees need: the right access, the right place to work, room to iterate, and time to earn trust. Ask every vendor these four questions.

ASK EVERY VENDOR	WHAT GOOD LOOKS LIKE	HOW SEEKOUT ANSWERS
01 The right tools and the right access	It connects to the systems where the work already lives: email, the ATS, Slack, Workday, calendar.	SeekOut works through the connectors IT already approved in your AI.
02 Work in the right place	It runs inside the AI your company already approved, not in one more window to log in to.	SeekOut MCP works today in Microsoft 365 Copilot, ChatGPT, Claude, Gemini, and Amazon Quick.
03 Iterate and adapt	It works with your process, takes feedback, and changes how it works in response.	When the hiring manager changes the spec, the AI coworker updates the search, and the workflow with it.
04 Earn autonomy over time	It starts by assisting and takes on more of the job only as it proves the work is right.	You set the autonomy level for each workflow: suggest, act with approval, or run on a schedule.

For your IT and security review of SeekOut MCP

- › Every action runs as the signed-in user, with that user's permissions
- › Your data is not used to train AI models
- › Encrypted in transit (TLS 1.2+) and at rest (AES-256) on Microsoft Azure
- › By default, nothing spends a credit, writes to your ATS, or sends a message without asking first
- › SOC 2 Type II, with annual third-party penetration testing
- › Security and legal FAQ at docs.seekout.com; trust center at trust.seekout.com

› Bring a role you're hiring for. See it worked live.
